

## An addition to the Cardkey P2000 family.

System Configuration Window

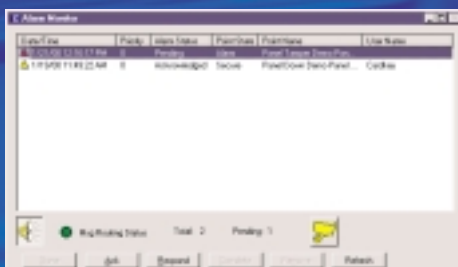

The Cardkey P2000LE system supplements the successful P2000 security management system from Johnson Controls. Specifically targeted for small to mid-size businesses, the system provides a feature-rich software core running under an MSDE database engine.

Based on the Microsoft® Windows® 2000 software system, the P2000LE provides a user friendly, intuitive graphical interface. System operators can access real-time, dynamic maps containing interactive icons from which security systems and functions can be managed with a simple click. Additional options include Guard Tour, CCTV and Video Imaging capabilities.

Cardholder Window

New intercom system integration gives the operator the flexibility to program intercom functions directly from the P2000LE graphical interface. In this manner, calls can be opened, closed and redirected using a single intercom station dialog box.

Alarm Monitor and Map Windows

Other features such as Threat Level Support allow operators to adjust security functions based on previously configured threat level parameters. In the event of an elevated security threat, modifications can be made to reader acceptance levels (from card only, to card plus PIN, to card plus PIN plus biometrics), and CCTV cameras and Guard Tours can be changed to reflect heightened security requirements.

### Simplified System Configuration

The Cardkey P2000LE security management system is designed for easy operation. With just three windows, you can accomplish all critical system configuration and maintenance functions:

- System configuration window lets operator configure and manage badge readers, alarm monitoring and output control devices.
- Cardholder maintenance window facilitates setup and maintenance of badge-holders and related access parameters particular to the individual.
- Alarm monitoring window gives immediate access to the current alarm queue, with graphic maps of alarm site.

### Fast, easy installation

The P2000LE involves a simple CD installation which after a few brief questions about your configuration takes about 20 minutes. Standard computer configurations allow you to supply the server of your choice.

### Plug-and-play software packages

Johnson Controls offers the Cardkey P2000LE Security Management System as a complete plug-and-play package with pre-installed software, or alternatively, as a software-only package for use on extra platforms or international applications.

### System packages available:

- Non-UL complete systems
- P2000LE software only

### The P2000LE system can also be customized with the following options:

- Metasys® system extended architecture
- Metasys BACnet integration
- BadgeMaster™ video imaging system
- Guard Tour for checking facilities
- MIS interface for importing ODBC compliant database
- CCTV capabilities for viewing facilities
- Intercom system integration
- Language options
- 8, 16, 32, 64 or 128 Reader versions
- DVR integration
- Crystal Reports for customizing reports
